

Parts & Service

At Colorbiotics, we've always believed that our word is just as important as what we make. That products should be honest. That promises should be accurate down to the decimal. We believe that the best of anything can be even better.

That's why customers trust us for everything from the mulch colorant that made our name to the machines behind the scenes and the parts that go with them.

Building Trust

Genuine gets the job done.

Big or small, part or piece of equipment, we understand what's at stake: Your product and your reputation. Your business. Your bottom line.

Stay true to the integrity of your coloring system and the standard that separates your product from your competition with Colorbiotics® genuine parts and accessories.

Our parts and accessories are manufactured according to the same exacting standards as our colorant and coloring systems. Otherwise we wouldn't put our name on them.

No matter what you might need, or when you might need it, just give our parts department a call at 888-663-6980, ext. 2, to have the real deal delivered to your door.

CM²⁰⁰

Looking to get your start in the industry?

The CM²⁰⁰ is a single-pump metering system that's made to move wherever you need it.

Just attach the CM²⁰⁰ to a grinder, trommel screen or any other kind of processing equipment to elevate your colorant distribution in an instant.

Our team is here to help find the right hoses and manifolds for your setup, with everything sourced from the same place. We can also supply the spray nozzles for your manifold, so you'll see more complete coverage while using less water.

Up to **400** cubic yards per hour
25 to 90 gallons of water per minute

Height: **40 in**

Width: **22 in**

Length: **40 in**

120 VAC / 1PH

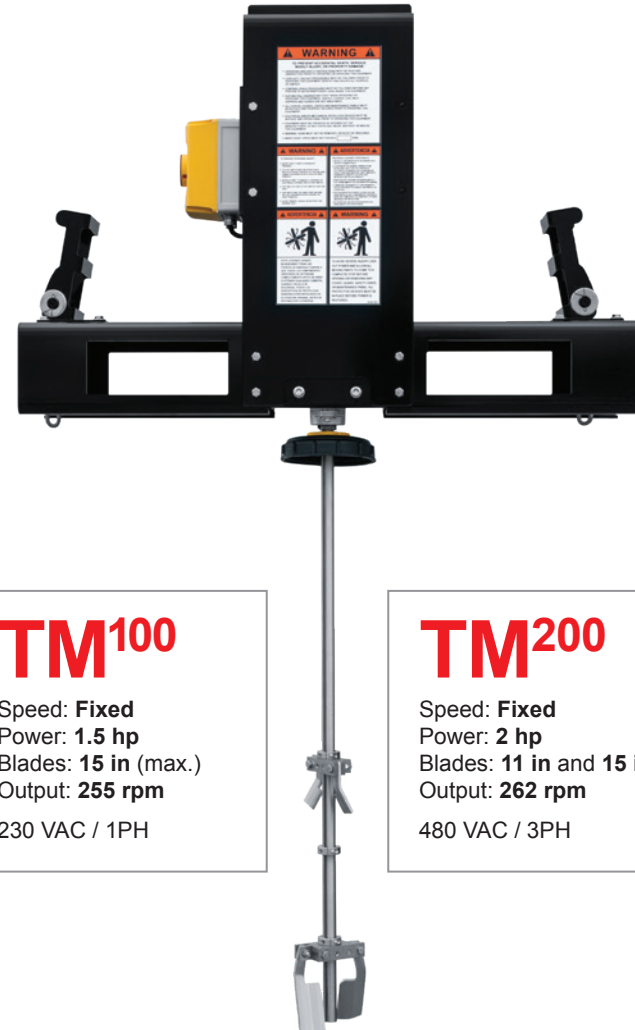

Tote Mixers

Tote mixers are a must-have for the mulch business. It's the mix that creates a better blend of chemistry inside the tote and gives you a uniform flow of colorant into the coloring system.

Both of our tote mixers — the TM¹⁰⁰ and the TM²⁰⁰ — are designed to get every ounce out of every tote. The dual impellers adjust to maximize the mix across container sizes, while the solid-steel blades retract to go in and out of totes as quickly as possible. We also developed our own collar on the blade locking system to make changeover even easier.

Retrofit Kits

Our research shows that blade length and tip speed are the two most important factors in mixing colorant. But older models of mixers might not have enough of either. Let us know if you need one of our retrofit kits with 15-inch blades and a 42-inch shaft.

TM¹⁰⁰

Speed: **Fixed**
Power: **1.5 hp**
Blades: **15 in (max.)**
Output: **255 rpm**
230 VAC / 1PH

TM²⁰⁰

Speed: **Fixed**
Power: **2 hp**
Blades: **11 in and 15 in (max.)**
Output: **262 rpm**
480 VAC / 3PH

Radial Stacking Conveyor

The Radial Stacking Conveyor is built to fit perfectly under the Sahara X Series, allowing mulch to flow straight from the machine onto the belt without hiccups or spillages.

Our radial stackers come with a power travel and brake option that lets you swing the conveyor a full 180 degrees at the flip of a switch. So you can place the next pile of mulch right where you want it.

These conveyors are constructed with a heavy-duty channel frame and chevron-cleated belt. And thanks to the self-lubricant system, the bearings are automatically lubricated and only require replacement twice per year.

Length: **18 ft or 50 ft or 60 ft**
Width: **36 in**
Dump Height: Up to **7 ft or 20 ft or 25 ft***
Electric Motor: **10 hp or 15 hp**

*Dump height is adjustable up to the max. measurement.

Platform Scale

The Platform Scale is a precision instrument for industrial environments. It features four load cells and 20 feet of load cell cable to accurately weigh product up to 5,000 pounds, plus a diamond-patterned steel deck. That deck provides operators with a non-slip surface, while ensuring the scale remains resistant to rain, sleet, snow and hail.

Capacity: **5,000 lb**
Accuracy: **0.2 lb**
Power: **115 VAC or 12 VDC**
Platform: **48 in x 48 in**

Downtime doesn't stand a chance.

A Sahara® coloring system is built to make you a whole lot of mulch and a whole lot of money for a long, long time. So, of course, we keep a complete inventory of genuine replacement parts — to keep your workhorse up and running, season after season.

There are more than 1,000 parts in our inventory, all manufactured from high-grade materials and tested to ensure a seamless fit within the coloring system.

Since so many Saharas are still kicking out mulch after 10 or 15 years, we stock inventory for legacy machines, same as the brand-new models.

You should still stock your own inventory, though. With parts on hand, you'll be prepared to swap out wear items before they break and ready to replace critical components in case of emergency.

*Talk to your territory manager about our **big book** of replacement parts.*

Parts Warehouse

We built this 15,000 sq. ft. warehouse to get replacement parts delivered as fast as possible. Now, our dedicated parts department can make sure customers receive exactly what they need within 24 hours if necessary. That kind of reliability and turnaround just can't be matched by manufacturers who outsource their parts.

Dura Blades

These blades for your Sahara last three times longer than other kinds. If you're looking for the complete package, we also stock arms and bolt kits.

AR Liner

We forge our liners from AR400 steel, a higher grade of abrasion-resistant alloy. It's the perfect material for protecting the inside of your Sahara.

Color Pump Rebuild Kit

These kits come with everything you need to rebuild your color pump: one replacement hose, one O-ring or gasket and plenty of glycerin lubricant.

From coast to coast, we have you covered.

With the largest service team in the industry, and a complete inventory of genuine replacement parts, Colorbiotics can keep you up and running all busy season long.

If your equipment ever requires attention or calibration, we'll be there to help. The trucks in our nationwide fleet carry replacement parts, 8,000-pound cranes, welders, torches and whatever tools are needed to take care of the issue, right then and there.

Cold Weather Package

No more spring overtime. Operate year-round with the new Cold Weather Package (CWP) — custom-built for the Sahara XP. CWP is powered by the main control panel on the XP and features an adjustable heater that kicks in automatically when temperatures drop below 45 degrees, but can be adjusted.

Plus, its heated box protects the color and water injection system while a heated blanket shields the high-pressure water pump.

Power180 Diesel Generator

When 3-phase line voltage is not available, the Power180 Diesel Generator gives your mulch yard the extra juice it needs without blowing your bottom line. The Power180 is compatible with all Colorbotics equipment and other select equipment up to 200 AMP, 3PH and 460 VAC. And our tech service team is available for setup, operational training, maintenance and support.

Prime Power Rated Generator

Marathon® Hard Duty generator with AVR
Mounted exhaust aftertreatment system
Programmable controls
Auto shutdown
2,000-hour engine warranty

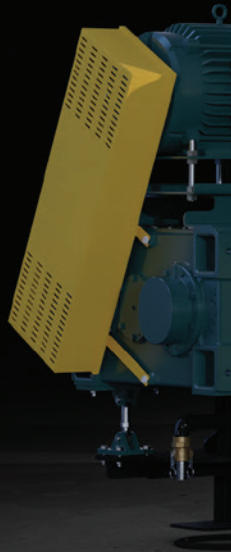

Call Colorbiotics. Your Sahara said so.

Give us a call to get genuine parts delivered to your door — even if you need a specific replacement as soon as the next day. Just dial our parts department at 888-663-6980, ext. 2, or email us at parts@colorbiotics.com and ask to have your order overnighted.

We can also be there to work with your team on your jobsite. With more machines working for more mulch producers than anyone else, our

team has seen too many problems complicated by local electricians and third-party suppliers. We'd rather deliver the real deal ourselves or simply make a trip to fix the issue firsthand. That way it's taken care of the first time around.

When you trust us, it's on us. We stand behind our science. We stand behind our service. We stand behind the way we do business. Because our word is just as good as what we make.
