Look anything but routine.

Colorbiotics® sand colorant is a safety-tested concentrate that adheres natural hues of green to the particles of sand in divot mixes and topdressing.

We started with the science behind the world's largest palette of colorant, then reengineered our formula to the exact specifications of golf course sand.

The result is colorant that encapsulates particle after particle in a consistent, concentrated shade.

Our sand colorant comes in two shades – Green and Dark Green – designed to match your local species of grass.

Available in totes (2,200 lbs.) and drums (260 lbs.)

Trust what's true.™
